

## Citizen Science in the Garden

Dr. Brian Starzomski

Did you know your garden is an important source of scientific information? Using his *BC Parks Citizen Science Project* **Dr. Brian Starzomski** will highlight how to participate in Citizen Science iNaturalist Projects; how this information is used to inform policy or to further research; how gardeners can set up their own Citizen Science Projects to collect information on biodiversity; and how such a project can be used to inform gardening decisions.

After this talk we know you will be inspired to flex your own citizen science muscles. As an added bonus Dr. Starzomski is bringing two students who will help registrants set up personal iNaturalist accounts at the lunch break. Don't forget to bring your personal devices.
